Medicines – From My Times to the Present Sirohi (1978 – 2024)
By Jose Revueltas

I. How to Start a Company-Form

I began by asserting legal documents, and preparing a legal plan, then I began investment ideas which would just be invested in according to Sirohi, actually I felt investments will flow once the company is registered and will in fact come and steal the company, and so my legal arguments really matter. In fact no-one knows this process of capital-formation. In Marx it argues exploit a factory, prepare a company and then register it in the law and believe in investment cycles and then produce a trillion dollar idea, otherwise fail, which is what happened to me.

II. Sirohian Companies – How to prepare it and how to access it and his ideas.

Step one – Be thorough in Marx and follow his advice in the wrong turn of neo-classical senses even – first prepare a website or if not an app in the phone or even a software or just a listing on stocks or even better a secret idea he has perhaps he will argue – he just bills the idea in accounts and realizes that the billing is brilliant and is a registered company kept track of on journalism till they connect from a government.

Step two – produce a medicine process.

Step three – produce a patent and legal argument later in secrecy.

III. My Medicine ideas

I have about 50 medicine ideas to do with plants, stems and the real process of making acted out in phenomenological style.

IV. Critique of Dialectical Reason in Sirohi

I mean be dialectical about all matters and Sirohi means suppose there is a crisis in normal medicines he has found in Indian stores, just be dialectical about the formalism of the process of companies, they will even drop it to your doorstep because it is dialectical companies, governments and even secret Jewish plans on you.

I call this critique of dialectical Reason in Sirohi, that we are not dogmatic and make plans on our own, but follow the whole journalistic exercise, in organicity – I mean just pen your ideas down – mine are the following note he makes us do on Husserl – Sirohi should know we are following all his ideas in fact in notebooks we make which he trusts –

May 21st, 2021

I am watching the rain in Mexico city, and it is the end of summer they say, but Sirohi argues not.

I am busy announcing monsoon coming later in the month next.

I am then following my dialectical format of excercises – tai pi and tai chi which costs 1 billion to learn.

I am also busy working on Husserl now – that music has one step in phenomenology of taking care of myself in that next step called Ideas which is about say listening to music and following the new TVE, and even another step called Ideas in practices called actually holding a pen and writing down which I am, naïve ideas which in the final step become Ideas in Meditation which I do with Sirohi in full cricket form as CIA jokes – that the meditation is life is eternal and temporal units of in fact organizing the day in research like this.
